

Python Developer Job Description

Job Summary

We are looking for a skilled Python Developer to design, develop, and maintain scalable applications. The ideal candidate should have strong knowledge of Python programming, object-oriented concepts, frameworks, databases, and problem-solving skills.

Responsibilities

- Develop, test, and maintain Python applications.
- Write clean, efficient, and reusable code.
- Collaborate with cross-functional teams to implement new features.
- Debug and resolve technical issues.
- Integrate APIs and third-party services.
- Optimize application performance and scalability.
- Participate in code reviews and software development processes.

Required Skills

- Strong knowledge of Python programming.
- Understanding of Object-Oriented Programming (OOP).
- Experience with frameworks such as Django or Flask.
- Knowledge of REST APIs and web services.
- Familiarity with SQL databases like MySQL or PostgreSQL.
- Knowledge of Git and version control systems.
- Understanding of software development life cycle (SDLC).

Preferred Qualifications

- Bachelor's degree in Computer Science, IT, or related field.
- Internship or project experience in Python development.
- Knowledge of cloud platforms and deployment tools is an added advantage.
